

Pre-launch test report

Site: <https://faisalmt3.github.io/> (my own portfolio — real test, used as a sample) · Tested 30 Sep 2026 ·

Tester: Faisal Almutairi

Method: Playwright + Chromium 152 on Linux at 1440×900 (desktop) and 375×740 (phone-size viewport), manual review of every link and section. No real phones used.

Summary

2 issues found, both Low, both fixed and re-tested the same day. 1 suspected issue checked and ruled out. No blockers for launch.

Issues

#	Issue	Where	Severity	Steps / evidence	Fix	Status
1	No favicon: browser requests <code>/favicon.ico</code> , gets 404 on every visit; tab shows a blank icon	All pages	Low	Open DevTools console on load → "Failed to load resource: 404". <code>curl /favicon.ico</code> → 404	Added an inline SVG <code><link rel="icon"></code>	Fixed
2	Top menu links are 20 px tall — below the 24 px minimum target size (WCAG 2.2, 2.5.8)	Header, desktop	Low	Measured link boxes: 83×20, 95×20, 66×20	Vertical padding on menu links → 50 px tall	Fixed

Checked and ruled out

Suspected	Result
Checkout button returns 404 (seen from a script fetch)	Not a bug: the store redirects scripted requests; in a real browser the checkout page loads with the right product and price.
Image wider than the phone screen (1020 px)	Intended: the workflow diagram sits in a swipe box with a "swipe to see it all" hint. Page itself has no sideways scroll.

Passed

Check	Result
Links	All 22 links work: 5 in-page anchors resolve, 13 outside links load (200), WhatsApp and email links correct
Layout	No horizontal scroll at 375 px or 1440 px; Arabic RTL (<code>lang="ar" dir="rtl"</code>) correct; phone number and email shown left-to-right
